**DETAILED ACTION**

1. Claims 1-25 are in the application.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 9, 11-12, 16, 17, and 19-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Mitchell.

Mitchell discloses a skirt for a boat covered dock including a plurality of panels hanging from a canopy frame. The panels include a door, located on the front and a rear boat entry panel. The panels are adapted to be rolled up by means of a pulley system 21. The panels are interconnected by tie members through grommet openings.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 5, 6, 10, 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitchell in view of Newton.

Newton discloses a boat cover and teaches the use of pockets on the cover to hold weights to maintain the canopy in the proper position. In view of these disclosures, it would have been

Art Unit: 3617

obvious to one skilled in the art to provide the panels of Mitchell with pockets at the lower edges to hold weights to maintain the panels in the proper position, generally as taught by Newton.

The arrangement shown in figure 2 of Mitchell appears to show such a pocket, but it is not disclosed as such. Such an arrangement however is well known in the art as taught by Newton and would be desirable to prevent the wind from lifting the panels.

Mitchell teaches the use of straps 59 for securing the sides of the panels. The use of other means including grommets and lines for the same purpose would have been an obvious matter of engineering design to one skilled in the art.

***Allowable Subject Matter***

6. Claims 4, 7, 8, 15, and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
